Re: couple of fixes for comic chat editor & server upgrades

Unfortunately The windows XP-Iso from the internet archive provided by your website has been DMCA* take down by Microsoft, however I have a guide to install it using the window Linux subsystem in Windows 10 and 11 . It's not perfect but it works

(* **DMCA** – '[THE DIGITAL MILLENNIUM COPYRIGHT ACT OF 1998](#)') https://mermeliz.com/download/dmca.pdf

----

 Installing Windows Linux Subsystem and Ubuntu:

*First make sure windows has done all updates, check your windows updates

*Bottom left had corner Windows search bar type in CMD

Open CMD

*In CMD window Type in

wsl –install

*When Linux subsystem and Ubuntu finish installing restart the computer

*after reboot linux will continue installation and promt to set up a user name and password , if nothing opens after your computer restart click the start menu and select ubuntu to finish installation

*Ubuntu will open in terminal and the user must make a usernam and password

Installing Flathub Repo ---

*when installation finished type in

sudo apt-get update

*when the update is finished type in

sudo apt update && sudo apt upgrade -y

*when that finishes type in

sudo reboot

*go to start menu and reopen ubuntu type in

sudo apt install flatpack -y

*now type in

sudo reboot

*re open Ubuntu from the start menu

*now type in

sudo flatpak remote-add –if-not-exists flathub https://flathub.org/repo/flathub.flatpackrepo

*now type in

sudo wget https://flathub.org/repo/flathub.gpg

Installing Bottles--

*now type

sudo flatpak install flathub com.usebottles.bottles

*select yes for all installations.

*Now type in

flatpak run com.usebottles.bottles

*when bottles open follow the prompts to finish installation, do not close the ubuntu window .

Installing Microsoft Comic Chat Editor Bottle--------------------------------------

When bottles finished click the bottles tab and create a new bottle

Name the bottle : Ex Microsoft Comic Chat Editor

select custom

under runner select sys-wine 8.0

Architecture Select 32 bit

click the create bottle

close the promt

on microsoft comic chat editor bottle you created click the ">" icon next to the gear icon

click settings

scroll down to Compatabilty , Select windows version Windows 95

Upper left hand corner select back "<"

scroll down to tools and click the drop down icon where it says Legacy Wine Tools"∨"

select configuration

click graphics tab

set screen resolution to 192 dpi

click apply then ok – leave bottles open -

Go to your start menu and type in file explorer

On the address bar click and type in Linux and make your way to the following folder

Ubuntu > Home > " a folder with your user name">

Drop the msccedit.exe file here

Go back to bottles and click run executable

click +other locations

click computer

now go to the following folders

home > "your user name" >

click on msccedit.exe

Click Yes on all promts

Go back to bottles Upper Left hand corner select back "<"

Click +Add Shortcut

Right click somewhere in the empty window where msccedit.exe resides and select "Show hidden files"

make your way to the following folder

.var > app > .com.usebottles.bottles > data > bottles > bottles > microsoft comic chat editor > drive_c >

program files > microsoft comic chat editor >

Click on Ccedit.exe

Upper right hand corner Click "Add"

Under Program you should see Ccedit with a play button and 3 dots

Click the 3 Dots

Add to Library

Click the back button , upper left hand corner "<"

Click on Library

Should see a square with no icon , hover your mouse over it and select Launch

----

Q&A

How do I start this everytime?

I don't know how to set a shortcut like a normal windows program , Just open Ubuntu from the start menu and type in

flatpak run com.usebottles.bottles

When I open Comic Chat editor , Im missing other tools like line, paintbucket ect?

On the Microsoft Comic Chat Editor bottles , select ">"

scroll down to tools and click the drop down icon where it says Legacy Wine Tools"∨"

select configuration

click graphics tab

set screen resolution to a number higher than 192, but don't max it out . The windows will become unusable. Slowly change it and try the program again until you reach a desired result . For some reason the program refuses to adjust to a proper resolution , making fonts bigger does help but do it a few at a time until you reach the desired result or else the windows will become unsuable and you will have to delete the microsoft comic chat bottle and start a whole new microsoft comic chat bottle process.
