Subject:	couple of fixes for comic chat editor & server upgrades

To whom it may concern:

I was given this email by madmax on his server for a few fixes that has cause issues on windows 10 or 11 64bit .

using the guide here http://mermeliz.com/win10x64help.htm
some weird issue wouldn't let me install the xp operating system properly , might be the updates to oracle however instead of using "dynamic allocate " the "fixed disk" option help to continue the tutorial further .

once xp was loaded the webbrowser was very slow to download the files , I found it to be much faster if a USB flash drive was connected to the PC , click the USB icon on oracle and let XP format the USB drive, click again to disconnect and it will connect back to the windows 10 or 11 machine properly formatted and place the needed files in the usb drive and click the USB icon on oracle and voila all the files needed were there.

finally I found this guide https://mac84.net/web/discord-via-irc/ or google " vintage mac discord " which works with microsoft chat to connect it to discord servers (also works with facebook chat , telegram and jabber)

The software used to to this is https://bitlbee.org/ or google " bitlbee ".

Hope these new fixes and features can further enrich the microsoft comic chat experience
